

Everest Kool Solutionz – Your Approved Transitional Facility

Everest Kool Solutionz is pleased to announce it has gained Approved Transitional Facility (ATF) status from MPI, and is now licensed to receive imported containers that may pose a biosecurity threat to New Zealand.

To become an ATF Everest's staff have undertaken extensive training to earn their certification as accredited persons and facility operators from MPI. The facility itself has been inspected and passed the strict criteria needed for an ATF rating.

As an ATF, Everest can receive and devan any at-risk imported containers, such as those carrying animal products, food products, medicines, and chemicals. There are several advantages to your business in using Everest for this work:

Cost

Paying for your own Facility can be expensive, especially if you're only going to be using the status on an occasional basis. For a pre-agreed handling fee, Everest can clear your imports quickly and efficiently.

Time

Taking time out for constant training and certification can prove counterproductive. Using Everest's ATF allows your staff to remain focused on their core business roles. Everest has two approved facility operators available at any time, together with appropriate accredited persons, to manage your imports clearance.

Convenience

Located just 20 minutes by road from the Port of Napier, Everest is ideally placed to minimize the time your goods spend being cleared for entry. The facility has the capacity to properly segregate 'at risk' imports, and has extensive chilled and frozen temporary storage options for goods that require temperature-controlled handling.

Distribution

As a recognized provider of supply chain and 3PL services and solutions, Everest can manage Cross Docking and distribution for you from their specialist warehousing in Hawke's Bay. With easy road, rail or sea networks accessible from here, regional and national distribution via Everest is fast and simple.

Everest has over 68,000 cubic metres of storage space across several storage rooms in Hawke's Bay, and is capable of handling products with storage temperature requirements of between +20C and -28C. This flexible arrangement, together with availability of bulk and rack pallet options, ensures Everest is well placed to manage everything that comes their way. As part of the long-standing and internationally recognized parent company, Group Spire, with its key business principles of being responsive, expert and experienced, Everest is backed by world class systems and knowledge.
